VICTORY INFORMATION · PEOPLEHUB HRIS

Presenter guide

How to prepare, run and follow up a client presentation with the interactive PeopleHub deck. Keep this open or printed on your first few visits.

01 Before the visit (15 minutes)

- **Learn the client.** Note their industry, country, headcount, HR team size, current tools, and the 3–4 things that hurt most. Use a short call or email beforehand.
- **Configure the deck** on the settings screen (see section 2). Spending five minutes here is what makes the demo feel like it was built for them.
- **Pick the length.** Ask how long you really have, then choose a 20 / 30 / 45–minute agenda. Leave 25% of the meeting for discussion.
- **Test on the real kit.** Open the hosted site (or the offline copy) on the laptop you will take. Check fullscreen (F) on the client's screen or projector, the sound, and your clicker.
- **Have a backup.** Keep the offline copy (`dist-offline/index.html`) on the laptop and a USB stick — it needs no internet or server. Also export the PDF (section 6) in case a screen fails.

Rule of thumb: the deck is a conversation, not a lecture. Plan to ask more than you tell.

02 The settings screen — what to fill in

- **1 Country** sets currency, statutory deductions (e.g. EPF/ETF, FNPF), tax name, leave types, compliance reports and sample names.
- **2 Industry** sets the headline, departments, roles, shifts, the illustration, and the sample data inside every module demo.
- **3 Client** name appears on the opener, ribbons, demo screens and the closing slide. **4 Logo** — upload a PNG/JPG/SVG (a transparent PNG works best).
- **6 Client numbers** (employees, HR team size) personalise the dashboards and the value estimator. Use the client's real figures if you have them.
- **7 Pain points** — tick up to four, and type any extra in their own words. These become the "What we heard" slide, a green "Solves…" tag on each relevant module, and a closing "challenges solved" recap.
- **8 Agenda** — Full deck, 20 / 30 / 45 min, a custom length, or Manual (tick slides, reorder with ▲▼). Auto mode always keeps the must-have slides and prioritises the modules matching the client's industry and pains.
- **9 Team link (QR)** — pre-filled with the hosted address. Leave "Client view" ticked so the client's team gets a safe version.

Press **Load presentation** to start. Your choices are remembered in this browser for next time, so remember to change the client name between meetings.

03 Running the session

A typical 30–minute flow (the timer in the footer shows whether you are ahead or behind):

Part	What to do
Opening · ~3 min	Thank them, state the agenda and the time. Show the opener, then “What we heard”. Read their pain points back and ask: “Is this still right? What is missing?” Capture changes.
Before & after · ~2 min	Walk down the HR manager’s day. Ask which row hurts most — that tells you which modules to linger on.
Platform overview · ~2 min	On the module map, the pulsing items are the ones we expect to matter for their industry. Click a module to jump to it; Backspace returns here. Follow their interest, not the slide order.
Modules · ~12 min	For each: one sentence of value, show the animated demo, read the green “Solves…” tag, ask “Does this match how you work today?” Skip fast if they nod; slow down if they lean in.
IT questions · as needed	If an IT manager is present, open the IT deep-dive slides from the grid (G): architecture, tenancy & deployment, security, integration. Keep to capabilities.
Why switch & value · ~4 min	Alternatives comparison, then the value estimator — drag the sliders with their numbers. Say the figures are indicative.
Packages & close · ~4 min	Recommend a package based on what they reacted to (no prices on screen). Finish on Next steps and ask for the discovery workshop date before you leave.

Presentation craft

- Press **N** to read the talk track and likely objections for the current slide, and see its planned time. The client’s team won’t see these in their link.
- Stand beside the screen, face the client, and use **L** (laser or spotlight) to point instead of turning your back.
- Let animations finish before you speak over them; each demo plays once when the slide appears.
- If the room goes quiet or time is short, press **G** and jump to the slide that answers their last question.

- Never read slides aloud. Use the headline, then ask a question.

04 Keyboard & clicker controls

`→ Space Enter Page Down (clicker next)`	Next slide
`← Page Up (clicker back)`	Previous slide
`Backspace`	Previous slide — or return from a module jump
`Home / End`	First / last slide
`G`	Slide grid: jump anywhere, or open slides hidden by the agenda
`N`	Presenter notes + planned time for the current slide
`D`	Timer with pace (ahead / behind). Click the timer to restart it
`L`	Pointer: laser → spotlight → off (for projectors)
`.`	Black screen (any key returns)
`T`	Light / dark theme
`F`	Fullscreen
`E`	Export the PDF leave-behind
`C`	Back to the settings screen
`?`	Shortcut cheat-sheet on screen

You can also click the left or right edge of the slide to go back or forward. Standard presentation clickers (Page Up / Page Down, or arrows) work without setup.

05 Handling questions

- **“Can it do X?”** — find the module on the overview (click it), or press G. If it isn’t in the agenda it is still reachable from “Not in this agenda — open anyway”.
- **“How is this different from what we have?”** — the “Why switch” comparison. Don’t name competitors; compare spreadsheets, patchwork tools and one connected platform.
- **“Is our data safe?”** — IT deep-dive security slide. Describe capabilities only (role-based access, MFA, SSO, encryption, audit logs). Do not claim certifications unless confirmed, and offer a security questionnaire under NDA.

- **“What does it cost?”** — the deck deliberately shows packages, not prices. Say a tailored proposal follows the discovery workshop.
- **“How long to go live?”** — the implementation slide is typical, not a commitment. Dates depend on scope and data quality.
- **“Can you build…?”** — note it, don’t promise a date, and confirm with the product team.

06 After the meeting

- **PDF leave-behind:** press **E** (or the settings screen’s Export button). When the preview is ready, choose *Save as PDF* — Landscape, Margins: None, Background graphics: on. It follows the agenda you presented and ends with the QR code.
- **Team link:** send the client the QR/link from the thank-you slide. It opens a client view with no presenter tools and a “Prepared for” ribbon.
- **Follow up within 24 hours:** thank them, attach the PDF, list the pain points you heard, propose two dates for the discovery workshop.
- **Update the notes:** record new requirements and objections so the next presenter benefits.

07 Rules of the road

- The percentages and hours on the before/after and value-estimator slides are **illustrative**, not guaranteed results. Say so, and replace them with real customer figures when you have them.
- Statutory rates and sample salaries are demo values. Do not quote them as current legal rates.
- Sample employee names and data are fictional.
- All 27 modules are presented as part of the platform. If a client needs something that is still being delivered, be honest about timing.
- Keep the hosted site behind its access login. Don’t share the link outside the client’s team.

08 Troubleshooting

- **Slides look small or cropped:** press F for fullscreen. The deck scales to any screen at 16:9.
- **The 3D network on the opener is missing:** the machine has limited graphics support. Everything else still works.
- **Slow first load:** open the site once before the meeting so the browser caches it, or use the offline copy.
- **No internet at the venue:** open `dist-offline/index.html` from the USB stick; no server needed.
- **Wrong client data showing:** press C to return to settings and check the country, industry and name — the last settings are remembered.

- **Client logo not showing in the team link:** a logo can't travel inside a QR code. Add the image to the site's `public/logos/` folder, redeploy, and enter its web address on the settings screen.
- **PDF looks blank or cut off:** wait for "Preparing…" to finish, then print with Margins: None and Background graphics on.

Questions or fixes? Contact the PeopleHub product team. This guide lives in the app (settings screen → Presenter guide, or add `?guide=1` to the address).
